The invention relates to 1 of 232 isolated or recombinant polymucleotiques canding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polymucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered benetype as compared to a wild-type or reference plant, or the plant as compared to a wild-type or reference plant, or the plant exhibits accepted secondarial as compared to a wild plant. Also included are a transgenic plant trait as compared to a wild plant. Also included are a transgenic plant trait as compared to a wild plant. Also included are a transgenic plant trait as compared to a wild plant. Also included are a transgenic plant trait sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant caquences comprising inputting sequence information selected from one of 46% fully defined sequences given in the specification. The isolated or recombinant polymucleotide is used for producing a plant having a neodified trait, the method comprising selecting a polymucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the corour into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified plant, and selecting for a modified trait (e.g. increased the polypeptide or antisense nucleic acid, thereby producing a modified plant, and selecting for a modified trait (e.g. increased the modified trait (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth are, lasf and flower senescence and many other traits listed in the recording the present sequence is one of the 232 polymucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   539
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      368

The Intention Fenaues to 1 of 25 isolated to 1 counciling in Fenaues to 1 complements, fragments, or related polynucleotide with 31% to 95% complements, fragments, or related polynucleotide with 31% to 95% complements, fragments, or related polynucleotide with 31% to 95% compared to a wild-type or plant exhibits an altered trait as compared to a wild-type or reference plant, or the plant exhibits enterpoly compared to a wild-type or reference plant, or the plant exhibits enterpoly compared to a wild plant. Also included are a transgenic plant comprising the polynucleotides, a computer readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant sequence from a database comprising a plurality of known plant sequence from a database comprising a plurality of known plant compliant polynucleotide is used for producing a plant having a modified trait, the method comprising selecting a polynucleotide that encombinant polynucleotide or an antisense mucleic acid, inserting the polynucleotide or an antisense mucleic acid, inserting the polynucleotide or an antisense mucleic acid, inserting the polynucleotide or an antisense mucleic acid, inserting the polynucleotide or an antisense mucleic acid, inserting the polynucleotide or an event or a cell of a plant to overexpress introducing the vector into a plant or a cell of a plant to overexpress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to 1 of 232 isolated or recombinant polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             producing a modified

plant, and selecting for a modified trait (e.g. increased production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth rate, leaf and flower sensecence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides encoding an A. thaliana transcription factor.

Arabidopsis thaliana expressed sequence related polynucleotide #332. ABX62217 standard; DNA; 422 25-FEB-2003 ABX62217; ESULT 9 BX62217 ≿ બ્ર

```
CDC2a and CDC2b are the only CDK genes to have been characterized in detail in Arabidopsis thaliana. They were used as bait in a two-hybrid screening assay with a cDM, library of a plant cell suspension as prey. The plant cell cycle interacting proteins identified were designated colds. From the plant cell cycle interacting proteins identified were designated buy115, PHO90-like protein, Vb33 Vb89, VbDAHP and VbHSF. The nucleic colds, vectors comprising them, the proteins they express, antibodies that bind to them and or inhibitors of their protein expression and/or activity may be used for modulating the cell cycle in an animal or plant, cycle proteins in a plant or animal cell, as positive or negative regulators of cell proliferation for modifying the growth inhibition caused by environmental stress conditions, eggeven of plants in normal or suboptimal nutrient conditions, especially property or cell prosphorus), for use in a screening method for inhibitors or activators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The VbDBP clone is very similar to the A. thaliana putative DNA binding protein and also contains a lot of homologies with Oryza sativa PCF2. VbDBP interacts with cyclin-dependent protein kinase (CDK) CDC2b but not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  regulatory sequences may be used as markers in plant or animal cell and tissue cultures or as a marker in marker-assisted plant breeding. The regulatory sequences may also be used for the expression of heterologous DNA sequences during a stage of the cell cycle.
                                                                                                                                                                                                                                                              Nucleic acids encoding plant cell cycle interacting proteins, useful for regulating plant growth and in recombinant DNA protocols
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of cell cycle protein, as growth regulators, herbicides and/or for inducing nematode resistance in plants. ```
The invention describes an Arabidopsis thaliana nucleic acid (I). The polypeptide (II) encoded by (I), transganic plant (III) or genetically modified cell (IV) are useful for screening "candidate agent for its biological effect, by combining the candidate agent with (II), (III) or (IV), and determining the effect of the candidate agent on (II), (III) or producing compositions that modulate the expression or function of its encoded protein, for mapping functional regions of the protein, in encoded protein, for studying associated physiological pathways, for genetic manipulation of calls, preferably plant cells, in screening assays of various plant strains to determine the strains that are capable of withstanding production of biosynthetic product fina plant, for withstanding production of biosynthetic product fina plant, for producing polypeptides, as probes for the detection of mancing or inhibiting production of biosynthetic product in a plant, for samples, to generate additional copies of (I), to generate ribozymes or oligonucleotides, as single stranded DNN probes or as triple-strand for transport of correct genetically and such as the correct genetically and such as the correct of correct control of the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as the correct genetically and such as and such as the correct genetically and such as the correct genetically and such as the correct genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  seful for introducing or lawrovens carrive agents, e.g., olerance in plants, screening biological active agents, e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         raits of interest, for screening programs; as crops which exhibit
anhanced tolerance to environmental stress, or to produce a factor. This
sequence represents a nucleic acid that may correspond to naturally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             occurring Arabidopsis thaliana expressed sequences. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transgenic organisms, such as plant cells and plants. (II) or (III) is useful for introducing or improving disease resistance and stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ledford BL, Woesener JP, Haas WD;

controlled as compared to a wild type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant tatit as compared to a wild plant. Also included care a transgenic plant trait as compared to a wild plant. Also included readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant equences comprising inputting sequence information selected from one of 46 fully defined sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a modified trait, the method comprising selecting a polynucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the polympeptide or antisense nucleic acid, thereby producing the vector into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth cate, leaf and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                              The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      282
                   An isolated or recombinant polynucleotide used to produce a transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   269 GGATGCCTGCCACGTGTGCGGCTAGGATTTTTCAATTAACTCGAGAGTTAGGTCACAAAT

phenotype as compared to a wild-type or reference plant, or the plant exhibits ecropic expression or altered expression or more genes associated with a plant trait as compared to a wild plant. Also included are a transgenic plant comprising the polymucleotides, a computer readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant sequences comprising inputting sequence information selected from one of 464 fully defined sequence given in the specification. The isolated or recombinant polymucleotide is used for producing a plant having a modified trait, the method comprising selecting a plant having a modified trait, the method comprising selecting a plant having a polympotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a caid into an expression vector, introducing the vector into a plant or a caid into an expression of plant or a selecting or a modified trait (e.g. increased producing a modified production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, seed and finit yield, growth rate, leaf and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides encoding an A. thaliana transcription factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô

```

The invention relates to an isolated nucleic acid molecule (1), maize yellow stripe 1 (ys1) or yellow stripe1-like (ys1) from Arabidopsis (ABN85763.ABN85771). (I) is useful for generating transgenic plants which metal or heavy metal contaminate from soil and for bioremediation of metal or heavy metal contaminated soil. (I) may also be used to aler the distribution of iron within the plant body so that edible parts of crop plants brave more iron. Transgenic plants may also be used in conventional plant breeding schemes to produce progeny which also contain the gene of interest. The present sequence is that of the Arabidopsis ysl encoding cDNA of the invention.

New yellow stripel and yellow stripel-like genes, useful for altering the distribution of iron within the plant body so that edible parts of crop plants have more iron, or for producing plants useful in enhancing iron uptake from soil

Patent No. 5436391
GENERAL INFORMATION:
APPLICANT: Hidday FUJIMOTO, Kimiko ITOH
APPLICANT: Mikihiro YAMAMOTO, and KO SHIMAMOTO
TITLE OF INVENTION: Insecticidal Protein-encoding Gene, Gramineous
TITLE OF INVENTION: Plants Transformed with the Gene, and Producti
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wenderoth, Lind & Ponack
STREET: 805 Fitteenth Street, N.W., #700
CITY: Washington
STREET: N.M., #700

Arabidopsis full.length cDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-I vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further

SK(-) phagemids. All steps to this point were performed in the TU Close lab at the University of California, Riverside (Fenton). Phagemids were plated, plasmid DNA purified, cDNA clones archived, and DNA sequences determined bi-directionally using an AB1350 at the Arizona Genomics Institute, University of Arizona (Collura Arizona Genomics Institute, University of Arizona (Collura Arizona Genomics Institute, University of Arizona (Collura Arizona Genomics Institute, University of Arizona (Collura Were transmitted to UC Riverside (by Yu), then processed at UC Riverside (by Wanamaker) using the HarvEsT pipeline (http://harvet.ucr.edu) to remove vector and cloning oligo sequences and various contaminants, and to trim to a high quality region. Sequences that retained a phred 17 region of at least 100 bases were deposited to GenBank."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AU239448 AFEL19 Arabidopsis thaliana CDNA clone RAFL19-81-E01 5',

NF118G06ST1F1051 Developing stem Medicago truncatula cDNA clone
NF118G06ST 5', mRNA sequence.
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carrinci et al., submitted for publication) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for further details.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnollophyta, eudicotyledons, core eudicots, rosids, eurosids I, Fabales, Fabaceae, Papilionoideae, Trifolieae,

/folone="Vector: pBluescript II SK+; Site_1: EccRI; Site_2: Xhol; The Harosoy NIL was constructed and seed was provided by Dr. J. Specht, University of Nebraska (Shoemaker and Specht, 1995). The CDNA library was constructed from mRNA isolated from whole seedlings of sweek old greenhouse grown plants. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dr) sequence with a xhol restriction site and a 3 anchor. EccRI adapters were ligated to the blunt-ended CDNA fragments followed by Xhol digestion. The CDNA fragments were directionally cloned into the EccRI-Xhol restriction site of the pBluescript vector. The ligated CDNA fragments were transformed into DH10B host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GAGCCCAAGGCGGAGCCGGTGATGCCGTCGTTTTCAATGTCTTTAAGCTCCACCGTCTTCG 195

/note="Vector: pBRcDNASfiAB; The library was constructed
from 10 different sources of RNA from a single genotype.
Separate cDNAs were generated using primers that
incorporated unique 5' and 3' tags to distinguish each
source of RNA. CDNAs were then pooled, size-fractionated,
directionally cloned into a custom medium-copy vector and
transformations made with four size classes to minimize
size blas. Details of each source of RNA and library
construction can be obtained at http://cgpdb.ucdavis.edu/
